

# E-Z Lay Pipe

## Insulated Water Pipe For Outdoor Wood Stoves

### Why choose E-Z Lay Pipe:

- **Preassembled** - Unroll and connect the ends. It's that easy!
- **Flexible** - No corners to buy, no corners to struggle with!
- **Pex-al-Pex Pipe** - Welded aluminum core assures you that no oxygen will permeate into the pipe.
- **Winter Sales** - Very little heat loss when laid on frozen ground.
- **Affordable** - Due to inexpensive pipe you can place the wood stove where you want.
- **Efficient** - Lengths up to 300'. No splice in the transfer lines.
- **Saves Money** - Only buy what you need! With cut to length prices no need to buy a full roll.
- **Easy Connections** - Screw compression fittings available in sweat or threaded, NO Special Tools

Part#  
PRF-CC7SF7  
1" Female Sweat

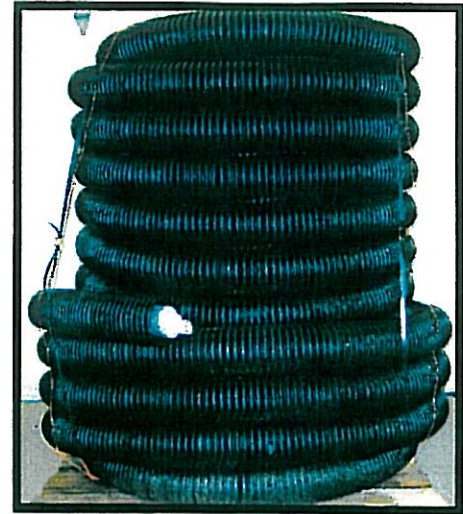

Part#  
PRF-CC7MPT7  
1" Male Thread

This completely preassembled pipe includes: Two 1" Pex-al-Pex lines. It is tightly wrapped with two wraps of closed-cell aluminum foil-faced insulation. This E-Z Lay pipe comes taped solid, covered with a 4" flexible plastic drain tile, and then coiled on a pallet for EASY transporting.

Let E-Z Lay Pipe take the hassle out of  
your next project!

WSD-EZCTL	EZ-Lay pipe cut to length w/1" Pex-al-Pex
WSD-EZSO	EZ-Lay pipe special order (you supply the pipe)

### A Few Measuring Tips

- Include the measurement from the house inlet to the bottom of the trench.
- Include the measurement from the stove connections to the bottom of the trench.
- Allow enough length inside the house for easy splicing to internal piping.
- Consider adding additional footage for an uneven trench, avoiding tree roots rocks etc.
